PROFESSIONAL SUMMARY

Senior Full Stack Developer with 4+ years of experience designing, building, and maintaining enterprise ERP applications across real estate, trading, distribution, construction, and contracting. Specialized in .NET Core (C#) back-end development with RESTful APIs, Repository Pattern, and Entity Framework Core, paired with Angular and DevExpress front-ends. Deep expertise in Oracle databases (PL/SQL, triggers, procedures, functions, views, schedulers) and a strong command of accounting data flow and financial entries. An early adopter of AI-assisted development (Claude, Claude Code) to accelerate delivery across back-end, front-end, and PL/SQL. Proven record of delivering end-to-end ERP modules — Finance, Budget, Asset, Inventory, Stock, Property & Leasing, Call Management, Case Management, Petty Cash, and Security — with real-time features (SignalR), third-party integrations, and dynamic reporting.

TECHNICAL SKILLS

AI-Assisted Development	Claude, Claude Code, prompt engineering, AI-assisted coding, review & refactoring, technical documentation
Back-End	.NET Core 5/6/7/8, C#, ASP.NET Core Web API, RESTful APIs, Entity Framework Core, Repository Pattern, Identity Framework, SignalR (real-time), NuGet package design & publishing
Front-End	Angular, Angular CLI, TypeScript, JavaScript, jQuery, DevExpress (DevExtreme), HTML5, CSS3, Bootstrap
Databases	Oracle (PL/SQL, Triggers, Procedures, Functions, Views, Schedulers), Microsoft SQL Server, MySQL
Reporting	Crystal Reports, SAP Reports, DevExpress Reporting, dynamic report systems
Architecture & DevOps	Microservices, Docker, Git / GitHub
Integrations	Payment Gateways, Email Services, Google Authentication
Domain & Practices	ERP data flow, accounting entries, approval workflows, requirements analysis, technical documentation, end-user training

WORK EXPERIENCE

Fakhruddin Properties | Nov 2021 – Present

Senior Full Stack Developer — Dubai, United Arab Emirates

- **AI-Assisted Development:** Leveraged AI tooling (Claude, Claude Code) as a core part of the development workflow to accelerate delivery of back-end APIs, Angular front-ends, and Oracle PL/SQL across ERP modules.
- Used AI to speed up boilerplate, refactoring, and code review, freeing time for architecture and business-logic work.
- Applied prompt engineering and safe, parameterized patterns to keep AI-generated SQL / PL/SQL consistent, reviewed, and injection-safe.
- Adopted AI to accelerate technical documentation and end-user training material.
- **Reusable Libraries:** Extracted common ERP audit-tracking patterns (Created/Updated/Deleted metadata used across Finance, Budget, Asset, and Leasing modules) into a published NuGet package (*Alkanzi.Auditable*), designed as a dependency-free interface so any entity — regardless of base class — can adopt standardized audit metadata; built a companion EF Core extension package (*Alkanzi.Auditable.EntityFrameworkCore*) for repository-level stamp-and-persist operations.

- **Finance & Leasing:** Implemented and customized ERP finance and property-leasing modules, giving stakeholders direct visibility into the financial impact of every transaction.
- **Budget Module:** Built budget planning, versioning, and approval workflows with enforcement of financial controls across project, financial, and contract budget types.
- **Asset Module:** Delivered asset management with bulk onboarding and full asset lifecycle tracking integrated into the accounting flow.
- **Inventory & Stock:** Implemented the Inventory module with real-time (SignalR) tracking of LPOs / Purchase Orders, including GRN, Excess, Returns, Stock Transfer, and Stock Re-adjustment, plus in/out tracking with barcode scanning for fast item access.
- **Call Management:** Built the Call Management module linked to inventory and the central warehouse for item requests, and ran company-wide training sessions on its use.
- **Case Management:** Developed the Case Management module to handle customer returned-cheque cases and vacating requests end to end.
- **Properties Module:** Developed property and unit management aligned with leasing, finance, and tenant operations.
- **Petty Cash:** Implemented the Petty Cash module with controlled expense entries and accurate accounting integration.
- **Security Module:** Designed a custom security module managing organizations, companies, branches, security groups, transaction menus, and employee roles and permissions.
- **Procurement:** Developed custom workflows and reports in Procurement to match transaction-specific approval processes, cutting approval turnaround time.
- **Integrations:** Integrated ERP modules with third-party platforms including payment gateways, email services, and Google Authentication.
- **Reporting:** Delivered a full dynamic reporting system across all modules, giving easy access to the finance impact of any process.
- **Enablement:** Conducted employee training sessions and authored documentation, measurably reducing support tickets.

FEATURED PROJECTS

Alkanzi.Auditable / Alkanzi.Auditable.EntityFrameworkCore

nuget.org/packages/Alkanzi.Auditable | github.com/ObaiAlkanzi/Alkanzi.Auditable

- Published NuGet packages providing a reusable, interface-based audit-tracking contract (Created/Updated/Deleted metadata) for .NET entities — usable without inheriting a specific base class — plus an EF Core extension for stamp-and-persist repository operations. Mirrors the core/provider split pattern used by libraries like Microsoft.EntityFrameworkCore.Abstractions.

Sales-Orders-Barcode

github.com/ObaiAlkanzi/Sales-Orders-Barcode

- Barcode-driven stock in/out tracking with quick item access, built to speed up warehouse and sales-order operations.

EDUCATION

Bachelor's Degree in Computer Science and Information Technology — 2019

LANGUAGES

English (Fluent) • Arabic (Basic)
